# **HOMELESSNESS IN ENGLAND 2023**

The numbers behind the story: research report

<b>Introduction</b>	<b>4</b>
<b>Methodology</b>	<b>6</b>
<b>National and regional results</b>	<b>8</b>
<b>Local results</b>	<b>9</b>

# Introduction

Homelessness in England is at a record high and is continuing to rise. Across the country expensive, damp, crumbling homes are making people sick and holding them back. That's the result of successive governments failing to build enough social homes and politicians ignoring the housing emergency.

This report sets out the huge scale of homelessness in England in 2023. And the areas where homelessness is most acute.

Homelessness can take many forms. This means that it is very challenging to accurately calculate the total number of people experiencing it. This report estimates the total number of people who are recorded as homeless on a given night in England in 2023. The types of homelessness included in this report are:

- People who have been accepted as homeless and now live in temporary accommodation arranged by their local council
- People who have been accepted as homeless and now live in temporary accommodation arranged by themselves or are living 'homeless at home' – meaning that they are legally homeless because it is not reasonable for them to continue to live in their home, but they are yet to be moved into temporary accommodation
- People who are sleeping on the streets (people sleeping rough)
- Single people who are homeless and living in hostel accommodation, but who are not counted amongst those in the statutory homelessness figures above
- People who are owed a duty under the Children's Act and are living in temporary accommodation that has been arranged by Social Services

We do not attempt to include the various forms of hidden or unofficial homelessness, such as sofa-surfing, or overcrowded households, and stick to what could be termed as 'recorded homelessness'. Wider definitions of homelessness would result in far more people being counted. Therefore, these figures are likely to be an underestimate of the true scale of homelessness. This report only covers England as Homelessness laws, eligibility criteria and conventions on counting and recording differ between England, Scotland and Wales.

## **Sky's story**

This report demonstrates the scale of the housing emergency that is currently raging in England. 309,000 is an astounding number, but every statistic is a person fighting for a home. Sky has shared her family's story to show the reality of homelessness behind this analysis.

Sky, 44, her disabled husband and their three children, aged 21, 16 and ,7 have been homeless and living in temporary accommodation in Newham for the past five years. Sky is a civil servant and works part-time, but the family lost their home due to a Section 21 no-fault eviction. They have now been moved to a new property.

Sky said: "The temporary accommodation we were given when we became homeless had severe mould and leaks that dripped through the electrics. We also had mice and they would go through our bread in the morning. My son has mould beside his bed in the bedroom. This made his health deteriorate and he struggled to breath. Eventually he got a skin condition and a cyst in his throat and had to take medication.

"No human being should live in conditions like that. None of it was fair on me, my children and our health. The worst part is not knowing where I will be next and how long I will be in temporary accommodation for. I used to just go and sit in my car and just look at the sky. I thought that if I broke down, the whole family would break down."

\*Sky is a pseudonym as the individual wishes to remain anonymous.

# Methodology

The table below sets out how each component of the total is calculated, with the numbers relating to the reference number for each element used in the tables. Links to the sources used are below.

<b>[1]</b>	<b>Estimated number of people homeless and living in TA arranged by the council as of 30<sup>th</sup> June 2023</b> <p>This is an estimate of the number of people (adults plus children) who live in households which have been found to be homeless and are living in local authority arranged temporary accommodation<sup>1</sup>. It is calculated using the detailed household type information in table TA2 of the Temporary Accommodation tables, from DLUHC's official homelessness statistics.<sup>2</sup> 'Other' household types are assumed to contain an average of two people. Q2 2023 data is used wherever possible, if it is not available, the most recent available quarter out of the last four quarters published is used. If no data was published in the whole year, the area is excluded.</p>
<b>[2]</b>	<b>Estimated number of people homeless and living in TA arranged by them or homeless at home as of 30<sup>th</sup> June 2023</b> <p>This is an estimate of the number of people (adults plus children) who live in households who have been found to be homeless and are living in temporary accommodation arranged by themselves or 'homeless at home', meaning that they are legally homeless because it is not reasonable for them to continue to occupy their home, but they have not yet been accommodated by the local authority. This data is found in the final columns of the TA1 tables in the same part of the official statistics above. Data is only published for the number of households and families with children, there is no breakdown of household type. We therefore assign the average regional household size of a household in council arranged temporary accommodation to the household's figure here. There are numerous wide variations in these figures which can appear anomalous, however these are figures submitted by councils to DLUHC, and are accurate to the best of our knowledge. The link to this dataset can be found below. Q2 2023 data is used wherever possible, if it is not available, the most recent available quarter is used. If no data was published in the whole year, the area is excluded.</p>
<b>[3]</b>	<b>Street homelessness</b> <p>This is also taken from DLUHC's homelessness statistics and is from the annual count of people sleeping rough, as at Autumn 2022 (most recent available).<sup>3</sup> These figures are widely considered to be an underestimate of the true scale of street homelessness, especially for some groups, such as women, who may be less visible due to the risk of violence when sleeping rough.</p>

<sup>1</sup> [Temporary housing when homeless - Shelter England](#)

<sup>2</sup> DLUHC, [Statutory homelessness statistics](#), Detailed local authority level tables, Table TA2.

<sup>3</sup> MHCLG, [Rough sleeping snapshot in England: autumn 2020](#), January 2023.

[4]	<p><b>Single homeless people living in hostels</b></p> <p>The estimated number of single homeless people living in a hostel on any given night is calculated using hostel bedspace data from the annual Homeless Link report.<sup>4</sup> The data is reported by region and 7% is removed to account for voids. We then remove the estimated number of single person households recorded as accommodated in hostels, local authorities or housing association properties, private sector accommodation leased by a council or run by a registered provider and other TA including supported lodgings in the statutory temporary accommodation figures (all categories in which beds reported in the Homeless Link figures could fall). This is calculated by removing households with children and applying the average proportion of single person households out of all households without children to the remaining figure. We report on this a national level only as the adjusted regional figure are not individually reliable enough to report on.</p>
[5]	<p><b>Social services accommodation</b></p> <p>The number of people (adults and children) living in temporary accommodation arranged by Social Services under section 17 of the Children’s Act is estimated using an FOI sent to all county and unitary authorities in England, asking what this figure was as of 30<sup>th</sup> June 2023 or the nearest available date. We received full responses from 40 (25%) of local authorities and partial responses from councils who could only report the number of supported children from a further 5 (3%) councils. Not all councils hold or are able to access this data. We simply report on the numbers supplied via the FOI. Data and knowledge on these households is scant, so no extrapolation or averaging up is done, meaning that this figure is very likely an underestimate.</p>
[6]	<p><b>Estimated total number of homeless people</b></p> <p>This is the estimated total number of people who are homeless. At the national level it sums up all five of the elements above, at regional and local level just the first three elements.</p>
[7]	<p><b>Rate of homelessness</b></p> <p>This is the rate of people who are homeless in the respected area, calculated by comparing the estimated number of people who are homeless to the total population of the area, using the latest available ONS population statistics.<sup>5</sup></p>
	<p>Estimates based on official statistics published by DLUHC, are used for all the levels of analysis in this report – national (England), regional and local. Data on people accommodated by social services are based on responses to FOIs and data on other single homeless people (outside of statutory provision) is based on a database of housing providers and adjusted. This means they have a wider margin of error, and is why they are not shown at regional or local levels. Local authorities have been removed from the analysis where data is unavailable</p>

## Laura's story

Data analysis is important to show the scale of the problem. But behind every number are people like Laura who must fight for a home. Laura has shared her family's story with us.

Laura was homeless with her two sons, 18-year-old Josh and 4-year-old Dylan earlier this year. Having been served with a no-fault (Section 21) possession notice by their private landlord, the family were facing homelessness last Christmas. Laura approached her council for help, but the temporary accommodation they offered wasn't suitable, as it was very unsafe for Dylan, who has autism. The council said she must take it, or she'd be offered no further help. That's when Laura approached Shelter's Dorset service.

Laura's Shelter caseworker, Gerard, helped her to argue that the temporary one-bedroom flat wasn't suitable for her family. Due to on-going building work, the balcony of the 4th floor flat was very unsafe for Dylan, who has no sense of danger. And the builder's drilling made his disability much worse. After three stressful weeks, Gerard's persistence with the council paid off and Laura was offered a more suitable two-bedroom flat, where they spent the next month. Then, eventually, in late March, she was offered a three-bedroom place which is perfect for their needs. It even has a garden, which is very important for Dylan's disability. He spent the summer much happier, playing in his playhouse. Laura was then able to turn her attention to arranging Dylan's Education, Health and Care Plan and finding him a suitable school.

Laura told us: "Shelter massively helped me. Gerard had so much knowledge and helped me so much with all the legal side of things. I fight constantly for my son needs but I don't know much about the rules on housing. I felt pressured to move into accommodation where Dylan wasn't safe. Definitely without Shelter we wouldn't be where we are now."
